BOTTLING SOLUTIONS

## Project Management

Each project will be executed at a quality level that meets global standards, respecting those standards in respect of schedule, budget and health and safety.

Sintec projectmanagers can manage every step of your project, they offer expertise and qualified project management, they are able to reduce technical risks, safety risks, prevent errors, control budgets and comply with all applicable requirements.

## Bottling line engineering

Sintec provides customised services for the engineering of complete bottling lines, re-engineering of existing bottling lines, lay-out engineering, efficiency improvement engineering, and many more engineering services.

We help our clients to minimise their costs, improve efficiency and ensure that their equipment operates at maximum capacity using latest technologies and innovative solutions.

## Sanitary Piping

Sintec is able to provide all kinds of sanitary welding works for the bottling industry.

Our welders and fitters are using first-class tools in order to guarantee the quality of our works.

## Automation

We offer first class automation solutions for the bottling industry. Our automation engineers do count with years of experience. We offer solutions on basically any common automation platform (Siemens, Allen Bradley, Schneider, Emerson,...)

Our service do include:

- Automation design
- Integration of new and used equipment
- Control cabinet design
- Soft & Hardware upgrades
- Energy efficiency optimisation
- Line efficiency optimisation

## Efficiency Audits & Optimisation

Sintec Bottling Solutions offers an innovative service for maximising the efficiency of bottling lines.

We developed a comprehensive and powerful analytical process called L.E.I.P. (Line Efficiency Improvement Program).

By implementing this program at our customers, they are able to increase the efficiency, lower their costs and this against a very attractive return of investment.

## Preventive maintenance training

To identify issues before they occur is how our customers are able to avoid unscheduled downtime. Sintec has a proven track of successfully executed trainings for management, operators and maintenance workers.

During this training we support your team in optimising their day by day routine. Where needed we are able to provide the supporting software as well.

In the event that customers do require actual physical support on the preventive maintenance activities, we are able to provide one or more of our experienced specialists.

## Spare Parts

Good maintenance means use of spare parts. Sintec is able to provide any kind of spare part for almost any kind of machinery being used in the bottling industry.

We promise a quick reliable delivery at competitive pricing and optional door-to-door delivery and installation.
